As a professional cabinet refacing expert, I understand that an aesthetically pleasing and functional bathroom is what everyone desires.

Cabinet refacing can help you achieve this goal by giving your cabinets a fresh, modern look without spending too much on replacement. Refacing expenses are significantly lower than replacing the entire cabinetry system in your bathroom.

Remember that having a trained professional handle the job ensures precision workmanship and long-lasting results that meet industry standards.

With new veneers or laminates applied to existing frames and doors, your bathroom cabinets will be revitalized and blend seamlessly with any design theme you desire – all while keeping costs at bay!

How To Restain Bathroom Cabinets

Restaining your bathroom cabinets is an excellent way to breathe new life into your space without the expense and hassle of completely replacing them. With a few simple steps, you can transform the look of your cabinets, giving them a fresh appearance that will make you feel more connected to your sanctuary.

Our expert cabinet refacing team recommends following these restaining techniques for exceptional results.

- **Choose the right stain:** Numerous cabinet finishes are available today. Selecting one that complements your existing decor while meeting your durability needs is essential. Oil-based stains provide richer colors and better protection against moisture, making them ideal for bathrooms.
- **Preparation is key:** Before starting the restaining process, remove all hardware from the cabinets and thoroughly clean their surfaces with a mild detergent or wood cleaner to eliminate dirt or grime buildup. After cleaning, lightly sand the surface using fine-grit sandpaper (150-220 grit) to ensure proper adhesion of the stain.
- **Apply multiple coats:** To achieve even coverage and desired color depth, apply at least two thin coats of stain according to manufacturer instructions, allowing ample drying time between applications. Use a high-quality natural bristle brush or foam applicator for smooth application.
